                                                                                                                                                                                                                               The invention describes an isolated, secreted and transmembrane polypeptide, termed PRO polypeptide (I). (I) is useful for detecting PRO4993, PRO337, PRO1559, PRO725, PRO7010 or PRO739 polypeptide, and for linking a bioactive molecule to a cell expressing the above polypeptides. The bioactive molecule is a toxin, radiolabel or an antibody and causes cell death. (I) is useful as therapeutic agent, in medical and industrial applications e.g. for treating neuropathy, especially peripheral neuropathy, diabetic peripheral neuropathy, AIDS-associated neuropathy, Charcot-Marie-Tooth disease, Refusum's disease, Abetalipoproteinaemia, Tangier disease, Krabbe's disease, Metachromatic leukodystrophy, Fabry's
                                                                                                                                                                                                                                                                                                                                                                                                         Example 114; Page 190; 459pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (GETH )

```
The invention discloses a hairpin sensor comprising a hairpin loop cassembly including a complementary probe positioned between a first cliuverse repeat arm and a second inverse repeat arm, and a quenchable complementary probe. Also claimed is a microarray comprising the hairpin complementary probe. Also claimed is a microarray comprising the hairpin complementary probe is bound, directly or indirectly, to a support, a kit complementary probe is bound, directly or indirectly, to a support, a kit complementary probe is bound, directly or indirectly, to a support, a kit complementary probe is bound, directly or indirectly, to a support, a kit complementary probe, a seemi-conductive, including at least one of the carticle is conductive or semi-conductive, including at least one of the capacite the complementary probe, or first space opposite the comprises a composite the complementary probe, or first space opposite the first inverse repeat arm composite the complementary probe, or first space opposite the first thind and hydroxyl. Further, the sensor comprises a ligand positioned between the second inverse repeat arm and the quenchable fluorescing agent which comprises a semiconductor nanocrystal corridation and a carboxyl, carbo

                                                                                                                                                                                                                                                                                                                                                                             hairpin sensors are arranged in a spatially-defined pattern. The sensor and system are useful for detecting a target nucleotide sequence in a sample. Further, the method involves identifying the target nucleotide sequence by the location of the complementary probe to which the target nucleotide sequence binds. The two or more hairpin sensors include complementary probes or quenchable fluorescing agents, that are different. The sequence presented is the hairpin oligonucleotide target sequence, #2, used in an example of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hairpin sensor useful for detecting a target nucleotide sequence in a sample, comprises a hairpin loop assembly including a complementary probe and a quenchable fluorescing agent.
                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                            CC mammalian embryonic stem cells into functioning cells, which comprises culturing embryonic stem cells in a medium comprising leukaemia inhibitor factor and basic fibroblast growth factor. In particular, the invention crelates to the differentiation of murine embryonic stem cells. The method control of into functioning cells. Other methods are useful for treating a mammalian embryonic stem cells into functioning cells. Other methods are useful for treating a mammalian compatient having disorders in pancreatic function, and in nerve function. CC functioning cells induced from embryonic stem cells using the present compatient having cells induced from embryonic stem cells using the present compatient particular cells induced from embryonic stem cells using the present compatible of the cells are pancreatic islet like cell clusters and nerve like cells. The function compatient cells are useful not only for cell transplant therapy, but for in vitro cells are useful not only for cell transplant therapy, but for in vitro cells are useful not only for cell transplant therapy, but for in vitro cells are useful not only for cell transplant therapy, but for in vitro cells are useful not only for cell transplant therapy, but for in vitro cells are useful not only for cell transplant therapy. But for in vitro cells are discovered to the vitro screening of various new drugs which affect or restore islet or nerve cells control of the invention of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S

                   This invention relates to a novel method for detecting nucleic acids. The method comprises providing nanoparticles with oligonucleotides attached CC to them, which have a sequence complementary to a sequence of two CC portions of nucleic acid, contacting the nucleic acid and nanoparticles CC of the nucleic acid, and observing a detectable change brought about by CC the hybridisation. The nucleic acid to be detected must have at least two portions and the distances between these are chosen so that when the CC nanoparticle-oligonucleotide conjugate binds the target sequence a CC detecting two or more nucleic acids (from a biological source) having at CC least two portions, such as viral RNA, bacterial or fungal DNA, a gene CC associated with a disease, synthetic, or structurally-modified natural CC associated with a disease, synthetic, or structurally-modified natural CC arguification. Nanoparticle-oligonucleotide conjugates of the invention are useful for preparing a nanoprobe conjugates of the invention are useful for preparing a nucleic acid bound to an electrode surface.

CC Nanoparticles and nanoparticle conjugates of the invention are useful for nanofabrication and for separating a selected nucleic acid having two portions from other nucleic acids. Datagnostic assays employing two conjugates of the invention are useful conjugates of the invention are useful for nanofabrication other nucleic acids. Datagnostic assays employing two conjugates of the invention are useful conjugates of the invention are useful for nanofabrication and for separating a selected nucleic acid having two conjugates of the invention are useful conjugates of the invention are useful conjugates of the invention are useful for nanofabrication and the separating a selected nucleic acid having two conjugates of the invention are useful conjugates 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Detecting nucleic acid having two portions, by providing nanoparticles having oligonucleotides attached to it, contacting nucleic acid and nanoparticles to allow hybridization, and observing detectable change.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-JUN-1999;

                                                                                                         Query Match
                                                                                                                                                                                                                        The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G nucleic action an aerosol formulation. The method and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represent an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acid detection methods and can be used to detect nucleic acids that are present in only small amounts in a sample. The present sequent represents a thiol modified oligonucleotide sequence used to demonstrathe method of the invention
                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 16; 221pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating and/or preventing allergy or asthma using an immunostimulatory nucleic acid alone or in combination with an asthma/allergy medicament.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2003-657977/62

The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
                                                                                                Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G nucleic acid in an aerosol formulation. The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                              Treating and/or preventing allergy or asthma using an immunostimulatory nucleic acid alone or in combination with an asthma/allergy medicament.

important for bone maintenance and plays a protective role in the cardiovascular system, as well as being required for normal sexual maturation through promoting growth and differentiation. Splice variants of ESR-alpha, however, have been associated with various cancers including the breast and pituitary. Accordingly, antisense oligonucleotides that inhibit the expression of ESR-alpha in cells or tissues can be used in gene therapy to treat conditions such as hyperproliferative disease, inflammation, tumour formation and to prevent or delay infection. As such, the present invention describes these
                                                                                                                                This invention relates to human oestrogen receptor alpha (ESR-alpha), as the novel antisense oligonucleotides that modulate its expression. The cestrogen receptor alpha protein is also known as cestrogen receptor 1, ESR1, and NR3A1. Oestrogen, the steroid hormone ligand of ESR-alpha, is
                                                                                                                                                                                                                                                 New antisense compound targeted to nucleic acid encoding estrogen receptor alpha and inhibiting expression of estrogen receptor alpha, useful for treating a disease or condition e.g. a hyperproliferative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antisense oligos as having cytostatic, antiinflammatory and antimicrobial activities. This oligonucleotide sequence is an antisense oligo used to inhibit expression of human oestrogen receptor alpha of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11-MAR-1998

The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for modulating biological activities of cells expressing PRO polypeptides, and for identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and cause cell death. The PRO polypeptides are useful for treating neuropathy and neuropathy related diseases such as Charcot-Marie-Tooth disorder, Refsum's disease, and Krabbe's disease. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Goddard

## WPI; 2003-596568/56.

Novel secreted and transmembrane polypeptides and polynucleotides encoding them, useful for treating wound healing, tissue growth and muscle generation and regeneration, amyotrophic lateral sclerosis o or

Example 114; SEQ ID ð 577; 472pp; English.

CC polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615 CC is useful in biotechnological and medical research, as well as in various CC industrial applications. PRO polypeptide such as PRO310, PRO320, PRO313, PRO311, PRO615, PRO703, PRO320, PRO311, PRO615, PRO616, PRO703, CC PRO808, PRO320, PRO311, PRO513, PRO615, PRO618, PRO702, PRO863, CC PRO200 is useful for therapeutic purposes. PRO363 is useful C muscle generation and regeneration. PRO37 is useful for treatment of wound healing, tissue growth and CC amyotrophic lateral sclerosis, neuropathy, AlbS-associated neuropathy or Cdiabetic peripheral neuropathy. A polynucleotide (II) encoding (I) is useful for generating transgenic animals or knockout animals which are CC useful for probes for generating a pool of sequences for identifying crelated PRO coding sequences, and to construct hybridisation probes for CC individuals with genetic disorders, for recombinantly expressing (I) and CC protein electrophoresis purposes, and as therapeutic analysis of CC useful for genetic disorders, for recombinantly expressing (I) and CC polypeptide (agonists) or prevent the effect of the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (agonists) are useful for tissue typing. PRO antibodies are useful for tissue typing. PRO antibodies (CC affinity purification of PRO from recombinant cell culture or natural corrects. This sequence represents a human seceretd and transmembrane PRO crotein associated primer. invention describes an isolated secereted reted and transmembrane PRO213, PRO700

New isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines.

Example 114; SEQ ID NO 577; 467pp; English.

The invention relates to an isolated PRO polypeptide (secreted or cransmembrane protein) having at least 80% amino acid sequence identity cransmembrane protein) having at least 80% amino acid sequences as given to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the proteins comprising a PRO proteins of the proteins are nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO comprising profuge is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO337 polypeptide, and PRO4993 polypeptide is useful for detecting PRO159 polypeptide, and PRO4993 polypeptide is useful for linking a PRO725, PRO7700 or PRO739. PRO4993 polypeptide is useful for linking a profuge is the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO337 polypeptide.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising C pRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO37 polypeptide is useful for detecting a PRO493 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO35 polypeptide, and PRO1559 polypeptide is useful for detecting
                                                                                                                                                                                                                                                                                                                                                                               Query Match

Novel isolated secreted and transmembrane PRO polypeptides, useful preparation of a medicament for treating a condition responsive to polypeptide, and as therapeutic agents e.g. vaccines. in the

Example 114; SEQ ID NO 577; 466pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence as given to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fiused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting PRO4993 polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an isolated secereted and transmembrane PRO polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615 is useful in biotechnological and medical research, as well as in various industrial applications. PRO polypeptide such as PRO300, PRO866, PRO703, PRO708, PRO320, PRO351, PRO352, PRO381, PRO615, PRO618, PRO772, PRO853, PRO860 or PRO8646 is useful for therapeutic purposes. PRO363 is useful therapeutically in vivo for lessening the effects of viral infection. PRO200 is useful for the treatment of wound healing, tissue growth and muscle generation and regeneration. PRO337 is useful for treating amyotrophic lateral sclerosis, neuropathy, AIDS-associated neuropathy or
                                                                                                                                                                                                          Human; 88; PCR; secreted protein; transmembrane protein; PRO; cyto. ophthalmological; antiarthritic; osteopathic; antirheumatic; vulne; auditory; tumour growth; retinal disorder; sports-related joint practicular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss; primer; in situ hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated secreted and transmembrane PRO polypeptides, useful preparation of a medicament for treating a condition responsive to polypeptide, and as therapeutic agents e.g. vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC to an amino acid sequence chosen from 94 fully defined sequences as given CC peptide, a PRO extracellular domain with or without its associated signal ceptide, a PRO extracellular domain with or without its associated signal comprisies. Also included are nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO contribute, PRO 933 polypeptide is useful for detecting a PRO493 polypeptide is useful for detecting a PRO493 polypeptide, and PRO1559 polypeptide is useful for detecting PRO7150 polypeptide, and PRO1559 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for linking a CC polypeptide is the toxin, radiolabel, or an antibody. The bloactive molecule to a cell expressing PRO137 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO1559 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO1559 polypeptide; and PRO1559 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO1559 polypeptide; and PRO1559 polypeptide is useful for modulating the cell expressing PRO159 polypeptide, where the cell is killed, PRO725, CC PRO700 or PRO739 polypeptide, PRO337 polypeptide is useful for modulating the propertide; and PRO1559 polypeptide is useful for modulating the propertide; and PRO1559 polypeptide is useful for modulating the propertide; pro725, pro700 or PRO739 polypeptide or an anti-PRO337 polypeptide; pro725, pro700 or PRO739 polypeptide or anti-PRO337 polypeptide; pro725, pro700 or PRO739 polypeptide or anti-PRO337 polypeptide; pro725, pro700 or PRO739 prof100 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

CC in the specification (including PRO lacking its associated signal CC peptide, a PRO extracellular domain with or without its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO37 polypeptide is useful for detecting a PRO499 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO397 polypeptide, and PRO1559 polypeptide is useful for detecting PRO355, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO355, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO37 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; and PRO1559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4593 polypeptide; and PRO159 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4593 polypeptide; and PRO159 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4593 polypeptide; and PRO159 polypeptide is processing PRO493 polypeptide or anti-PRO377 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO725, CC PRO700 or PRO739 polypeptide or anti-PRO337 polypeptide, where the cell is killed. PRO337 polypeptide, processing PRO4933 polypeptide; processing PRO559 polypeptide; processing PRO5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     given
```

```
CC to an amino acid sequence chosen from 94 fully defined sequences as given cc in the specification (including PRO lacking its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell C comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide. CC similarly, PRO493 polypeptide is useful for detecting PRO337 CC polypeptide, PRO700 or PRO739 polypeptide is useful for detecting PRO337 CC polypeptide, and PRO1559 polypeptide is useful for detecting PRO357 CC polypeptide, and PRO1559 polypeptide is useful for inking a consecutive molecule to a cell expressing PRO337 polypeptide is useful for linking a consecutive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule consecutive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule consecutive molecule are useful for linking a consecutive molecule to a cell expressing PRO493 polypeptide; PRO725, CC pRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide; PRO725, CC pRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide is useful for RO337 CC pro700 or PRO739 polypeptide. PRO493 polypeptide is cell expressing PRO325. CC pro700 or PRO739 polypeptide. PRO493 polypeptide is useful for linking a bioactive molecule on a cell expressing PRO337 polypeptide. Sc consecutive molecule on a cell expressing PRO337 collective molecule on a cell expression and PRO337 collectiv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-MAR-1999;

                                            polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO4993 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful fe modulating the biological activity of the cell expressing PRO559 polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or ant PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders aports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss mammals. The present sequence is a Tagman PCR primer used investigate P gene amplification in certain tumour cell lines.

New secreted and transmembrane PRO nucleic acids and polypeptides, useful for stimulating the release of tumor necrosis factor alpha from human blood and stimulating the proliferation of differentiation of chondrocyte

Shelton

멅

Example 114; SEQ ID NO 577; 462pp; English

Ct transmembrane protein) having at least 80% amino acid sequence deemtty
Ct co an amino acid sequence chosen from 94 fully defined sequence as given
Cc in the specification (including PRO lacking its associated signal
Cc peptide). Also included are nucleic acids encoding the PRO proteins
Cc mentioned above, a vector comprising a PRO nucleic acid). A host cell
Cc comprising the vector and producing PRO. Acids encoding the PRO proteins
CC mentioned above, a vector and producing PRO. Acids encoding the PRO proteins
CC pRO fused to a heterologous amino acid sequence, and an anti-PRO
CC antibody. PRO337 polypeptide is useful for detecting a PRO4933
CC polypeptide in a sample suspected of containing PRO4993 polypeptide.
CC Similarly, PRO4933 polypeptide is useful for detecting a PRO4933
CC polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting
CC pRO7155 polypeptide, and PRO1559 polypeptide is useful for linking a
CC bloactive molecule to a cell expressing PRO337
CC polypeptide of the coal. PRO337 polypeptide is useful for linking a
CC causes death of the call. PRO337 polypeptide is useful for linking a
CC pro700 or PRO739 polypeptide are useful for linking a bioactive molecule
CC causes death of the call expressing PRO4933 polypeptide is
CC pro700 or PRO739 polypeptide are useful for linking a bioactive molecule
CC polypeptide is useful for modulating at least one biological activity of
CC polypeptide or anti-PRO493 polypeptide, where the cell expressing PRO337
CC polypeptide or anti-PRO493 polypeptide is useful for modulating the pro725, pro725, pro725, pro725 polypeptide or anti-PRO337
CC polypeptide or anti-PRO493 polypeptide is useful for
CC modulating the biological activity of the cell expressing PRO725, pro725, pro725 polypeptide is useful for modulating the pro80359
CC pro739 polypeptide is useful for modulating the pro80359
CC pro739 polypeptide is useful for modulating the pro80359
CC pro739 polypeptide is useful for modulating the pro80359
CC pro739 polypeptide is useful for modulating The invention relates in certain tumour cell lines. to an isolated PRO polypeptide (secreted or ) having at least 80% amino acid sequence identity

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence as given to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide.

PRO4993 polypeptide tecting PRO337

PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO1559 polypeptide, and PRO1559 polypeptide is useful for detecting CC PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive causes death of the cell. PRO337 polypeptide is useful for linking a CC bioactive molecule to a cell expressing PRO337 polypeptide; PRO725, CC PRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; PRO725, CC PRO700 or PRO739 polypeptide. PRO4993 polypeptide; PRO725, CC PRO700 or PRO739 polypeptide. PRO4993 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 (C PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337 (C PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337 (C PRO700 or PRO739 polypeptide or modulating at least one biological activity of the cell expressing PRO337 (C PRO700 or PRO739 polypeptide or anni-PRO493 polypeptide; RRO337 (C PRO700 or PRO739 polypeptide or anni-PRO4993 polypeptide; RRO337 (C PRO700 or PRO739 polypeptide or anni-PRO795, anti-PRO735, polypeptide; RRO4993 polypeptide; RRO4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 961

The present sequence repreprimer used in the invention.
                                                                                        The present invention describes a method for detecting wheat and barley fungal pathogens which are resistant to certain fungicides. The wheat and barley fungi are Tapesia yallundae and Tapesia acuformis, which cause eyespot disease. The present invention describes nucleic acid molecules, a kit and a method which are useful for detecting the fungal pathogen, and can be used for monitoring disease development in plant populations. The present sequence is used in the exemplification of the present

                                                                                                                                                                                                                                                                                            hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonuclectide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by the nucleic acid and observing a detectable change brought about by
  Nanotechnology nucleic acid detection method associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the mucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detecting nucleic acid having two portions, by providing nanoparticles having oligonucleotides attached to it, contacting nucleic acid and nanoparticles to allow hybridization, and observing detectable change.

                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to methods of detecting nucleic acids whether natural or synthetic and whether modified or unmodified. The invention also relates to materials for detecting nucleic acids and to methods of separating a selected nucleic acid from other nucleic acids. The invention is useful for detecting nucleic acid having at least2 portions. The present sequence is an oligonucleotide used to synthesise and purify fluorescein labelled oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detection of nucleic acid with two portions comprises providing nanoparticles having oligonucleotides, contacting nucleic acid ananoparticles to allow hybridization of oligonucleotides on nanoparticles, and observing detectable change.
                                                                                                                                                                                                                                                                                                                                                                                       Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mirkin

Also disclosed are raf oligonucleotides, nucleic acids, proteins and compositions used in the methods of the invention. The oligonucleotides have cytostatic and antiarteriosclerotic properties, are useful as Raf-inhibitors and in antisense-therapy. The methods and compositions of the present invention are useful for preventing and/or treating conditions associated with raf expression, such as hyperproliferative disorders, atherosclerosis and tumours. This sequence represents a human b-raf
Detection of nucleic acid useful for, e.g. research and analytical laboratories in deoxyribonucleic acid sequencing, comprises contact nucleic acid with at least two types of nanoparticles attached with oligonucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-JUL-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                           The invention relates to a novel method for identifying a wheat variety having the Wx-Dle (waxy) gene comprising detecting the presence or absence of the amylose synthetase (Wx-Dle gene). The method of the invention may be useful for efficiently identifying a wheat variety having the Wx-Dle gene. The current sequence is that of the bread wheat Wx-Dlb-related PCR primer of the invention.
                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                    Claim 11; SEQ ID NO 18; 38pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying wheat variety having Wx-Dle or absence of amylose synthetase gene.

The isolated human gene of the invention is useful for detecting the single nucleotide polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also effective in detecting single nucleotide polymorphisms in a human gene. This polynucleotide sequence represents one of the PCR primers used in the single nucleotide polymorphism

The isolated human gene of the invention is useful for detecting the single nucleotide polymorphisms in human gene. The isolated human gene is also useful for diagnosis of disease and determination of side effect to a medical agent. The isolated human gene is also effective in detecting single nucleotide polymorphisms in a human gene. This polynucleotide sequence represents one of the PCR primers used in the single nucleotide polymorphism in a human gene.

Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO37 polypeptide is useful for detecting a PRO493 polypeptide. PRO739 polypeptide in a sample suspected of containing PRO493 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting pro1959 polypeptide, and PRO1559 polypeptide, and PRO1559 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4993 polypeptide is useful for detecting PRO725.

```

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy for treating obesity or diabetes, in chromosome and gene mapping, and as chromosome markers in tissue typing.

Example 114; SEQ ID NO 577; 520pp; English.

compride, a PROMETRIAL NATIONAL WITHOUT ITS ASSOCIATED SIGNAL
Competide). Also included are nucleic acids encoding the PRO proteins
Commentioned above, a vector comprising a PRO nucleic acid), a host cell
Comprising the vector and producing PRO, a chimaeric molecule comprising
C PRO fused to a heterologous amino acid sequence, and an anti-PRO
C antibody. PRO337 polypeptide is useful for detecting a PRO493
C PRO337 polypeptide is useful for detecting a PRO493 polypeptide.
C Similarly, PRO493 polypeptide is useful for detecting PRO337
C PRO7100 or PRO735. PRO700 or PRO739 polypeptide is useful for detecting
C PRO725, PRO700 or PRO739. PRO4939 polypeptide is useful for linking a
C PRO1559 polypeptide, and PRO1559 polypeptide is useful for linking a
C PRO700 or PRO739 polypeptide are useful for linking a
C PRO700 or PRO739 polypeptide are useful for linking a
C PRO700 or PRO739 polypeptide are useful for linking a
C PRO700 or PRO739 polypeptide are useful for linking a
C PRO700 or PRO739 polypeptide are useful for linking a
C Useful for linking a bioactive molecule to a cell expressing PRO4939 polypeptide; and PRO1559 polypeptide is
C PRO700 or PRO739 polypeptide are useful for linking a bioactive molecule
C Delypeptide is useful for modulating at least one biological activity of the cell expressing PRO3725,
C PRO700 or PRO739 polypeptide, where the cell is killed. PRO3725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide, where the cell is killed. PRO3725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO739 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO393 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO393 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 or PRO393 polypeptide or anti-PRO393 polypeptide; BRO725,
C PRO700 promased by PR to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal The invention relates to an isolated PRO polypeptide (secreted amplification protein) ij certain tumour cell lines. having at least 80% acid sequence given

Sequence 20 BP; 4 A; 7 C; 4 G; 5 Ţ, 0 ٦: 0 Other;

Non-nucleotide probe of the invention #12

```
CC from genomic nucleic acid, to one or more undesired sequences in an assay CC for determining target genomic nucleic acid of a sample. The method CC comprises contacting the sample with the one or more undesired sequences in an assay CC comprising 5-50 probes), contacting the sample with the one or more CC detectable nucleic acid probes, and determining the target genomic nucleic acid probes, and determining the target genomic contacting the sample with the one or more CC more detectable nucleic acid probes, and determining the target genomic nucleic acid of the sample. The genomic nucleic acid is contained in a fixed tissue or a CC cell, and the sample is metaphase spreads, interphase nucleic acid with that of a control sample using a genomic nucleic acid with that of a control sample using a genomic nucleic acid and CC control genomic nucleic acid, which are differentially labelled, the array or both the sample and control genomic nucleic acid and CC contacting the array with treated mixture of sample and control genomic nucleic acid and contacting the array with treated mixture of sample and control genomic nucleic acid, which are differential labels of the array to contacting one or more variations in copy numbers of sequences in the CC that caused by hybridization of the probes to genomic nucleic acid, thus determining one or more variations in copy numbers of substantially correct the array is determined using an intercalating dye or a detectable antibody, cor its fragment, that is specific for a nucleic acid nucleic acid hybrid. The sample of genomic nucleic acid hybrid. The sample of genomic nucleic acid hybrid. The fragment, that is specific for a nucleic acid nucleic acid hybrid. The fragment, that is specific for a nucleic acid hybrid. The fragment, that is specific for a nucleic acid hybrid. The fragment, that is specific for a nucleic acid hybrid.
                                                                                                               of the genomic array is determined by determining the presence, absence, amount or location of the detectable label on the one or more genomic arrays. The genomic array comprises nucleic acid that is prepared from

Claim 10; SEQ ID NO 26; 103pp; English.

CC comprising 5-50 probes), contacting the sample with the one or more of comprising 5-50 probes), contacting the sample with the one or more or nucleic acid of the sample by determining the target genomic connucleic acid of the sample by determining the hybridization of the one or more detectable nucleic acid probes to the target genomic nucleic acid of the sample. The genomic nucleic acid is contained in a fixed tissue or a coll, and the sample is metaphase spreads, interphase nucleic or nucleic found in paraffin embedded tissue material or frozen tissue sections. The probe is also useful in comparing a sample of genomic nucleic acid with that of a control sample using a genomic nucleic acid and the array. CC The method comprises treating a sample of genomic nucleic acid and control genomic nucleic acid and the array or both the sample and control genomic nucleic acid and the array or both the sample and control genomic nucleic acid and the array of contacting the array with treated mixture of sample and control genomic nucleic acid, the control acid acid under suitable hybridization conditions, and comparing the contacting the array with treated mixture of sample and control genomic nucleic acid, thus determining one or more variations in copy numbers of sequences in the control sequences in the control sequences in the control sequences in the genomic nucleic acid nucleic acid, thus determined as compared with the relative copy numbers of substantially correct from the genomic nucleic acid hybrid. The sample of genomic nucleic acid to be tested and the reference of nucleic acid are labelled with detectable motety such that hybridization of the presence. Absence of the sample with detectable motety such that hybridization conticis acid hybrid. The present sequence represents a non-nucleotide probe. The probe is useful for suppressing the binding of one or more detectable nucleic acid probes, that are greater than 100 base pairs and that have been derived from genomic nucleic acid, to one or more undesired sequences in an assay for determining target genomic nucleic acid of a sample. The method comprises contacting the sample with the mixture of probes (preferably of the genomic array is determined by determining the amount or location of the detectable label on the one presence, absence, or more genomic

New isolated PRO polypeptide e.g. PRO200, PRO322, PRO540, PRO846 or PRO617 polypeptide, useful for treating sight loss due to retinitis pigmentosum by enhancing retinal neural cells survival.

Example 114; SEQ ID NO 577; 465pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO493 polypeptide.

Claim 15; ID NO 1310; 872pp; English.

junctions of genes encoding a polypeptide associated with lung and/or nassal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of bronchoonstriction, and inflammation in a subject; stissue, or treating bronchoonstriction, The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of lung inflammation, lung allergies, or a respiratory disease or condition Note: The sequence data for this patent is not represented in the printer specification, but was obtained in electronic format directly from WIPO ftp.wipo.int/pub/published_pct_sequences the printed e œ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                           junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine of, or reducing sensitivity to adenosine, reducing levels of adenosine property and prophylactic or therapeutic sensitivity to adenosine, reducing levels of deposine or receptor, producing bronchodilation, increasing levels of ubiquinone or
                                                     lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5 or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  31-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                            first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 6' creations of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antial array dysfunction and a second active agent comprising an antial flammatory, antial lergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a common suppressive, and cytostatic activity. The composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antisinflammatory steroid in a subject, for reducing or depleting levels of activity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or increasing levels of adenosine receptor producing bronchodilation, increasing levels of account of the prophylactic or the pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nassal airway dysfunction and a second active agent comprising an cantiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory seroid in a subject, for reducing levels of adenosine of or reducing benefitivity to adenosine, reducing levels of buliquinone or lung suffectant in a subject, or treating levels of buliquinone or lung suffectant in a subject, or treating levels of buliquinone or lung suffectant in a subject, or reserving levels of buliquinone or lung suffectant in a subject or treating levels of which in a subject or treating levels of which in a subject or treating levels or buliquinone or lung suffection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                               The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisence to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of Junctions of genes encoding a polypeptide associated with lung and/or CC masal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive, have a CC immunosuppressive, and cytostatic activity. The composition may have a CC immunosuppressive, and cytostatic activity. The composition may have a CC immunosuppressive, and cytostatic activity. The composition may have a CC for enhancing the prophylactic or therapeutic respiratory effect of an CC information gensitivity to adenosine, reducing or depleting levels of activity at prophylactic or therapeutic respiratory effect of an conformation, producing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing bronchoconstriction. CC lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed as pecification, but was obtained in electronic format directly from WIPO as fer fire with a chart of the printed of th
